

Nevron Insulation

Industrial Insulation &
Process Heating Specialists

Company

Nevron is one of the leading providers of thermal engineering services in the UK. Established in 1974, Nevron has a strong reputation for providing high quality, value engineering and reliability. Nevron specialises in all aspects of process insulation and heating, providing the most comprehensive solutions for manufacturing, process, commercial and marine applications. Nevron operates from two facilities, each with comprehensive manufacturing facilities to support our customers with the highest quality installation.

Nevron's main facility at Bidston, Wirral, has full sheet metal manufacturing facilities including a state-of-the-art CNC plasma cutting bed to provide a consistent level of excellent quality. Nevron's facility in Rotherham, South Yorkshire has manufacturing facilities for flexible removable covers and is our design centre for industrial process heating.

Nevron provides a complete service of design, manufacture and installation using our highly qualified team of Thermal Insulation and Electrical Engineers. Our team offer the combination of experience and innovation to support our customers nationwide.

Quality

Maintaining high quality standards is a founding principle of the business. Nevron has ISO 9001:2000 approval that forms the basis of all operating procedures and standards. All materials are traceable to source batches and detailed records of the manufacturing and installation process are maintained to provide a full project history.

Health & Safety

In partnership with the quality regime, Nevron has a comprehensive Safety Management System in place which provides for full Risk Assessment of each installation prior to the commencement of works. Installation teams are trained to nationally recognised standards and hold CCNSG Safety Passports and CSCS Cards. Nevron is a member of the Merseyside & Cheshire Construction Safety Group (MCCSG).

Insulation

Increasing government regulations aimed at improving energy efficiency places a greater burden on users to reduce overall energy consumption. Nevron provides its customers with a complete service in the supply and installation of insulation solutions to assist this process.

Insulation is recognised as a key component in reducing energy costs, maintaining efficient product process and providing a safe operating environment. Effective insulation of pipework, tanks, pumps, valves and associated equipment will produce immediate energy savings, often resulting in very short pay back periods.

Nevron's range of solutions are designed specifically for our customers and are aimed at providing maximum operating efficiency.

Installation

Nevron has its own well equipped sheet metal fabrication shop which supports an experienced team of Thermal Insulation Engineers in providing the highest quality service. Our installation teams work with a variety of metals including stainless steel, aluminium, plastic coated steels and Aluzink. In addition to metal cladding Nevron can provide a "hard set" GRP finish for tanks, reactors, vessels and pipework. Our Thermal Insulation Engineers operate on a national basis across all markets, with a core of specialists for critical applications in the refrigeration sector. Nevron provides full project management to ensure installations fit in with our customer requirements and programmes.

Sheet Metal Fabrication

Our sheet metal fabrication shop also manufactures and supplies third party requirements including a number of other insulation companies. Our modern work shop includes the latest generation Blue Marlin CNC Plasma Cutter and a full complement of lock formers providing for both large and small Pittsburgh and Snap Lock seams. The ability to work with metals in both sheet and coil form allows Nevron to be a cost effective supplier in the fabricated materials market.

Removable Covers

Nevron has in-house design and manufacture capability for flexible removable covers (mats) using a wide range of materials to meet all applications. Along side the standard valve and flange covers, Nevron manufactures made to measure covers for pipe lines, vessels, tanks and pumps. We manufacture both high (up to 1000°C) and low temperature covers for both indoor and external applications.

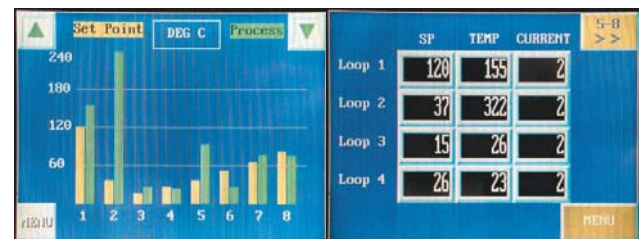

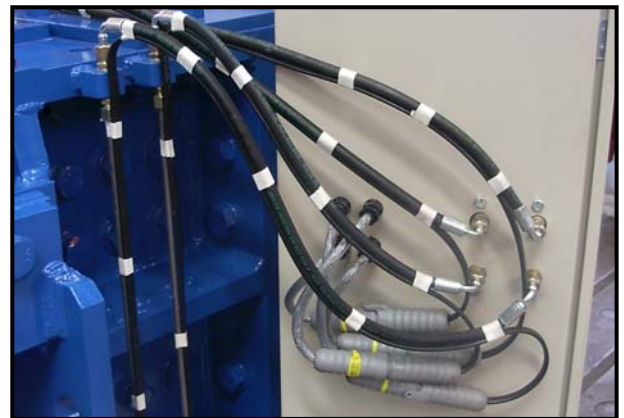

Combined with metal cladding, removable covers make the ideal complimentary system for flanges and high maintenance equipment such as vales and pumps. Our design team are very experienced in manufacturing solutions to fit difficult shapes or sizes, large or small, to ensure that you have the best fit and long lasting removable covers.

Process Heating

Complimenting our insulation services, Nevron design, supply and install electric process heating systems. As an independent supplier of heating systems we are not tied to any particular technology or manufacturer and consequently our designs provide the most appropriate solution for your requirements.

Most solutions use trace heating as the primary means of heating. We supply systems that are designed to be modular, enabling maximum ease for maintenance. We install our heating systems under our insulation and outer covers as well as providing removable and portable heating systems for pumps, valves, IBC's, drums and vessels using our flexible covers.

Control for heating systems is designed to meet each application needs. Control complexity can range from the very simple on/off system to fully integrated PLC temperature and fault monitoring.

Markets & Applications

Nevron supplies all of the industrial manufacturing, process and utility markets on a project by project or site contract basis. Our industrial heating capability includes design for hazardous areas, process control, storage vessels and portable applications. A summary of our key markets and applications are found on the back page of our brochure.

Water Utilities

Nevron is an approved supplier for a number of Water Utility Companies (Severn Trent, Yorkshire Water) and many of the key Utility Contractors such as Nomenca, Norwest Holst & GCA. Nevron provides its full range of insulation and heating services. In addition Nevron manufactures bespoke removable heated covers for pumps, valves and ancillary equipment using our plug and socket trace heating system allowing easy access to these critical parts for maintenance.

Refrigeration

The importance of good workmanship and insulation specification in cold applications cannot be understated. Nevron are a leading company in the insulation of Ammonia pipe work, Surge Drums, Packaged Chiller Units, Glycol Pipe work and Cold Air Ductwork in the Temperature range + 4°C to - 54°C. Our team has extensive knowledge of the specific applications that are required in this highly specialised sector of the market.

Nevron Insulation

Industrial Insulation & Process Heating Specialists

Services:

Insulation & Cladding
Insulated Flexible Covers
Process Heating
Sheet Metal Fabrication
Cryogenic
Fire Protection
Wall Cladding
Acoustic

Applications:

Chemical & Petrochemical
Food & Confectionery
Pharmaceutical
Paper
Refrigeration
Utilities
Marine
Power Generation

Head Office:

Nevron Eurotherm Insulation Services Ltd
Unit 16 Valley Road Business Park
Bidston
Wirral
