

Removable Heated Covers

Nevron has developed a range of heated removable covers for applications where the need for regular maintenance or portability is essential. The removable covers are designed to have trace heating fitted into sleeves attached to the inside face of the jacket. The trace cable has a plug and socket that allows easy connection/disconnection to the rest of the line.

The system can be used for any application where standard trace heating is required including outdoor requirements. Nevron has its own design and manufacturing capability to ensure that heated removable jackets can be produced specifically for each requirement.

The system resolves the recurring problem of trace heating and insulation not being replaced after essential maintenance that can lead to further operational problems. The system is ideal for pumps, valves, containers, vessels and loading points.

Nevron's jackets can be manufactured using a wide variety of materials and insulation, ensuring that the best combination is used to give a rugged, robust solution for all applications. The system can be used to create a modular heated system encompassing many parts of a process line or equipment. Reusability is a key component of the design to enable jackets to be removed and replaced many times without the need for new jackets

- **Modular Heating & Insulation System**
- **Quick & Easy Removal/Re-fitting**
- **Ideal For Valves, Pumps, Containers, Vessels**
- **Trace Heating Plug & Socket System**
- **Designed To Be Maintenance Friendly**
- **Nationwide Installation Service**
- **ISO 9001:2008 Approved**

Pumps & Valves

Insulating and heating pumps and valves in a way that enables effective performance and that survives the first maintenance visit is a difficult task. Traditionally the heating would be fitted around the pump or valve and then the insulation added and often metal clad. Once removed, this type of system rarely fits back in place properly and as a result becomes less effective leading to greater maintenance demands.

Nevron's heated removable jacket modular system solves this problem by incorporating the heating into the jacket. With a simple plug & socket connection the system can be used for all sizes and types of valves & pumps for internal and external applications.

Easy replacement of the covers after maintenance will extend the serviceable life of pumps and valves.

Nevron Insulation is a leading provider of insulation and process heating systems. Our highly experienced team hold nationally accepted qualifications and accreditation for all forms of insulation and heating services, working throughout the industrial sector in the water utility, confectionery, petrochemical, paper, construction and pharmaceutical sectors. Nevron provides a fast, reliable and professional design, manufacturing and nationwide installation service. Details of all our services and national contacts can be found on our web site.
